Media Invitation

PATH Project Team to Preview Specific Plans for Kemptown Substation

Allegheny Energy and the PATH Project Team invite reporters to learn more about the Potomac-Appalachian Transmission Highline project, with a specific focus on the Kemptown Substation. Join us for a briefing on Thursday, Sept. 16, when we will unveil a cutting-edge video simulation depicting how the Kemptown Substation might appear from a number of nearby vantage points. The simulation illustrates how plantings and earthworks will screen the substation, and will be the centerpiece of an upcoming public information meeting concerning the substation scheduled for Sept. 20.

WHO: Presenters to include James Haney, the company's Vice President of Transmission, other PATH Project Team members, and representatives from Truescape, the New Zealand firm that produced the simulation.

WHAT:

- Presentation on the need and siting of PATH transmission line and related Kemptown facilities, with an explanation of how the substation will operate and appear from different vantage points.

- Press preview of the substation video simulation. Learn how it was produced and talk to the people who created it.

WHEN: Thursday, Sept. 16, 10 a.m. to noon

WHERE: Allegheny Power's Frederick Service Center (directions attached).

- Please RSVP to Todd Meyers at 724-838-6650; 724-244-1761 (cell) or by e-mail at tmeyer1@alleghenyenergy.com no later than noon, Wednesday, Sept. 15.
